Course: CSE299

Section: 16

Overview

We are creating a common platform as a local market-oriented website. Which will make an online local market globally. Every seller will have a subdomain like

[xyz.anyname.com or anyname.com/xyz] . They can add their product and sell the product easily.

Goals

1. Precisely our first target is who is wanting to business in the online world but has not any platform or website to do. We will give them a platform and which one will be very user-friendly and attractive.
2. Our next target makes this platform as a universal for all of the established business.

Specifications

Primarily we will create web app for this project.

Project Audience

Prospective clients will be who hasn't any platform to do online businesses.

Features List and Pages

Homepage

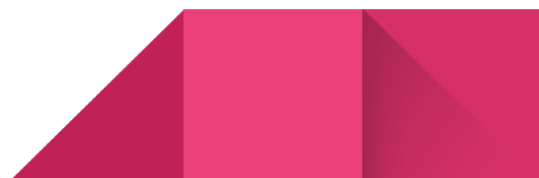

- Product form various sellers will show here.

Subdomain page
